## 3. Photography.

The matter should be explored based on USAFE processing of Middle East photography in order to make that establishment adequate for tactical intelligence purposes with the original negative being dispatched to HTAUTOMAT for either LOG-E-TRONIC printing or additional duplicate positive manufacture at Eastman.

4. Consolidated analysis of all take for analysis purposes would seem to be feasible if all units of USAFE-

25X1

and Photographic Processing Unit--were under the same security system. Some special juggling of personnel might be required, but these are merely matters of detail to be worked out, not matters of principle.

## 5. Security System.

There already exist TALENT Control Centers at the places in the theatre discussed above and in the ZI. It would, therefore, in no way interfere with but would rather facilitate the organizational arrangements outlined if the material were poured into the TALENT system. One advantage would be that it would add credence to the notion which Mr. Bissell has held that as soon as possible the TALENT system should become a repository for a number of overflights or other sensitive means of collecting intelligence rather than strictly
